## Abstract of DE4443756

The massage device has a support column carrying a pivot arm, with a roller oscillation body (10), having an eccentric drive motor (13), supported for rotation at its free end. The oscillation body is provided with a cover plate (11) at each side, with a guide plate (14) and a motor plate (12) with the attached drive motor, supported between them. At oscillation crank rod (18), supported by an eccentric at either end of the motor drive shaft (15) locates in a guide provided by the guide plate, with an oscillation plate (25) attached to the crank rods.
